

ECO FRIENDLY LANYARDS 2023

BEST GIFTS
PROMLO 

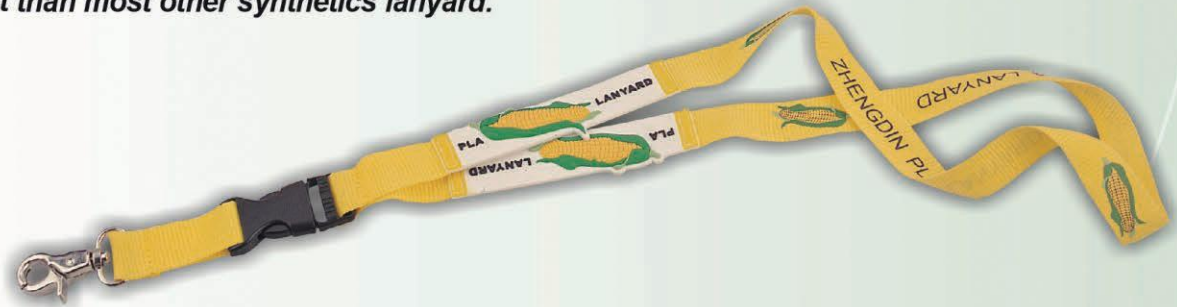

PLA Fiber start with an abundant, natural raw material like corn that can easily and efficiently be reproduced each year. This corn is put through a simple process to make plant sugars. The sugars are fermented in a process similar to making yogurt. Then the fermentation products are transformed into a high-performance polymer called polylactide, which is branded NatureWorks. The fiber is extruded from this polymer. The production means less greenhouse gases are added to the atmosphere. Greenhouse gases are the chief contributor to global climate change. Compostability and chemical recyclability mean that under the right conditions and with the right handling, the complete life cycle of production, consumption, disposal and reuse is neatly.

Eco Friendly Lanyard, PLA (polylactic Acid) fiber lanyard

Fibers from Plants, not oil

Eco Friendly Lanyard is made by PLA, Which is more resistant to ultraviolet light than most other synthetic lanyard.

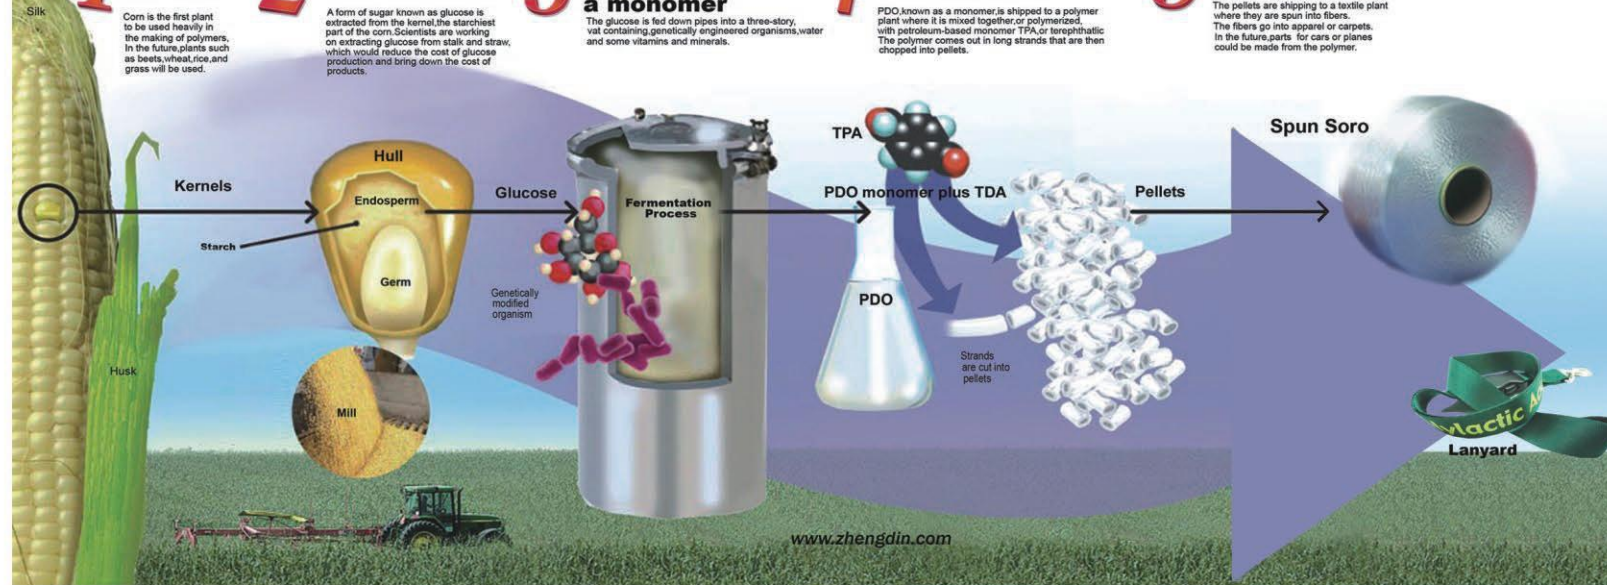

New Product, new technology arena

Detailed Description:

- * High technology from nature fiber
- * Bio-degradable material (release 100% CO₂ and H₂O)
- * Less inflame ability
- * Refresh and low odor retention
- * Does not support bacterial growth
- * Easy care and durable
- * Available for flat/tubular/woven lanyards

1 Harvesting the corn 2 Getting sugar from the corn 3 The fermenter: Turning sugar into a monomer 4 Turning monomers into polymers 5 Fiber and fabrics are created

Recycled PET Bottle lanyard

Green environmental protection: After the production and consumption, normal fiber products will generate lots of wastes, which will pollute the environment directly or indirectly. This product is the reuse of waste, which can reduce the environmental pollution effectively.

Good safety: PET bottle and polyester are the same material, which has the same property with polyester fiber, such as non-toxic, good safety.

Bamboo fiber

Lanyards/belts

Green & Biodegradable

Bamboo webbings is 100% made from bamboo through a high-tech process. The raw material bamboo is well selected from non-polluted regions. They are all 3-4 years old new bamboo, of good character and ideal temper. The whole distilling and production process is green process without any pollution. Bamboo webbings can be 100% biodegradable in soil by microorganisms and sunshine. The decomposition process does not cause any pollution in the environment.

Organic Bamboo Certificate (OCIA)

the nature, green and eco-friendly new-type textile material of 21th century

A fast growing renewable natural material without the use of any fertilizer and decomposing naturally, bamboo is a 100% eco fiber. Containing a special substance and with a special microstructure, it is an anti-bacterial, breathable and cooling fiber suitable for multiple applications.

GREEN & BIODEGRADABLE
NATURALLY ANTI-BACTERIAL

BAMBOO LANYARDS

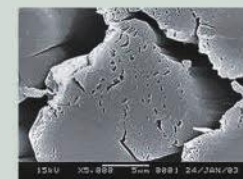

The reason why bamboo can be moth-free and non-mildewed is that it has natural anti-bacterium content named bamboo chinone. During the production process of bamboo fiber, we have preserved its natural anti-bacterium and de-bacterium function after many tests. Moreover, it has passed inspection of Shanghai Prevention Medical Research Institution, SGS, and Japan Textile Inspection Association

绿色环保, 永续发展

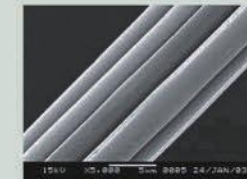

spinning process

pulp dipping → compression → comminutionaging → etiolation → dissolution → filtration
→ maturation → debuggling → spinning → consolidation → cut → after treatment

Basically reserve natural character of bamboo fiber. Its section is full of irregular space, which help to absorb and vaporize moisture immediately, possessed of excellent capillary effect of absorbent quality and air permeability.

ORGANIC COTTON LANYARDS

LoveEarthUseO rganic

WHAT IS ORGANIC COTTON?

- Organic field must be fallow more than three years and it cant use synthetic fertilizers and pesticides
- Sterilant cant be used on seeds.
- Herbicides, insecticides, and defoliants is not allowed.
- Organic field and conventional cotton field must be comparted.

Organic cotton yarn certificate

Eco-Friendly

Conventional Cotton vs. Organic Cotton

- Every Lanyard made of conventional cotton requires 1/50 pounds of harmful chemicals.
- Over 50 million pounds of chemicals were used on U.S. cotton field each year.
- Cotton uses approximately 25% of the world's insecticides and more than 10% of the pesticides (including herbicides, insecticides, and defoliants.)

Why Use Organic Cotton?

- Corporate Social Responsibility, such as: H&M, M&S
- Organic agriculture protects the health of people and the planet by reducing the overall exposure to toxic chemicals from synthetic pesticides that can end up in the ground, air, water and food supply, and that are associated with health consequences, from asthma to cancer

Screen-printing Polyester Lanyards

About Silk-screen Printing

We provide top quality silk-screen imprinted lanyards.
 A Fine mesh screen is made from the customers artwork.
 The screen is laid on top of the material and the colored ink is applied over the screen. A squeegee pushes the ink through the mesh screen to create the design beneath on the fabric. All our Silk-screen imprints are done manually, rather than through a machine, allowing us to maintain the highest standards in imprint quality, clarity and sharpness.

SC1501 SC1502 SC1503 SC1504

SC1505 SC1506 SC1507 SC1508 SC1509 SC1510 SC1511 SC1512 SC1513

SC1519 SC1520 SC1521

Silk-screen printing is effected one by one color, so the more colors, the higher unit price. Silk-screen printing mold could be made quickly, mold revising relatively convenient and colors matching exactly. For silk-screen printed lanyard, the lanyard bottom color is normally the color dyed out from yarn.

SC1514 SC1515 SC1516 SC1517 SC1518

SC1522 SC1523 SC1524

SC1525

Silk-screen printing unit price changes not much because of quantity, i.e. small quantity not very expensive, bigger quantity not much cheaper than smaller, so if a small order and unit price in a tight budget, silk-screen print is recommended. For silk-screen printing the other sideprinting will be applied after repeating all processes of the first side printing, i.e. re-organize the lanyard on the working base and then printing them one by one color, so two-sides printing unit price has much difference from one-side printing, which is the reason why Silk-screen printing is normally applied to one side.

CMYK & Multi - colored Imprinted Lanyards

SC1525 SC1526 SC1527 SC1528 SC1529 SC1530

SC1531 SC1532 SC1533 SC1534

SC1535 SC1536 SC1537

Silk-screen Printing Nylon

SC1538 SC1539 SC1540 SC1541 SC1542 SC1543

Silk-screen printed logo must not approach the edges, For example, for a 20mm width lanyard, the width of logo should be no more than 16mm, 25mm lanyard, logo no more than 21mm..

SC1544

SC1545

SC1546

SC1547

SC1548

3D PRINTING LANYARD

3D PRINTING LANYARD

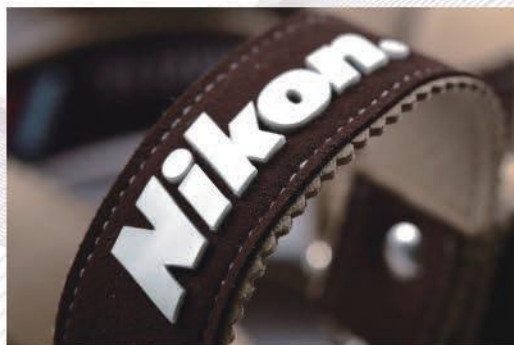

3D1501 3D1502 3D1503 3D1504 3D1505

3D1506 3D1507 3D1508

3D printing is a new technology of silk screen printing, nowadays it becomes more and more popular, because the 3D looking of logo, the 3D printing can be 1mm high, we can do solid color printing for 3D printing, CMYK off-set printing for 3D printing is also available, normally, the webbing is thicker than normal flat lanyard, then it looks more quality and more flat. Recommend 3D printing to your clients, they will love it!

Genuine leather lanyard with 3D printing and embroidery logo

This style lanyard is the most luxury design, embroidery logo and 3D printing logo on genuine leather lanyard, makes the lanyard look high quality and high class, it's good for luxury brands or the people who like the classic articles.

熱轉印

Durable imprinting

The design remains smooth because of the method used. Heat-transferring lanyards offer durable imprinting onto these lanyards providing you with an imprint that will last for the life of the lanyard, no more rubbing off or fading.

DYE-SUBLIMATED LANYARDS

Heat-transferring is a superior printing process that can create multicolored, highly detailed designs. With this method the customer's design is transferred to a fine paper that uses dye sublimation inks. The paper is placed on the lanyard and pressure and heat are applied, causing the image to become enmeshed into the material.

HT1507 HT1508 HT1509 HT1510 HT1511 HT1512 HT1513 HT1514 HT1515 HT1516

Heat-transferred Printing

only the mold charge for multi colors is higher, and mold time longer.

Heat-transfer printing is indirect printing, so the colors are very difficult to completely match exactly, even if it is the repeated order, colors still

hard to match exactly.

DYE-SUBLIMATED LANYARDS

Heat-transferred

The unit price of heat-transfer printing will have great different according to the quantity increasing, for normal smaller quantities, the mold charge and unit price is much higher than silk printing, but for multi colors, especially quantity up to medium scale, the cost will be lower than silk printing. More especially if colors many, both sides printing needed and quantity not small, choosing heat transferred printing is high-graded and economic.

HT1517 HT1518 HT1519 HT1520 HT1521 HT1522 HT1523 HT1524 HT1525

HT1526 HT1527 HT1528 HT1529 HT1530 HT1531 HT1532 HT1533 HT1534

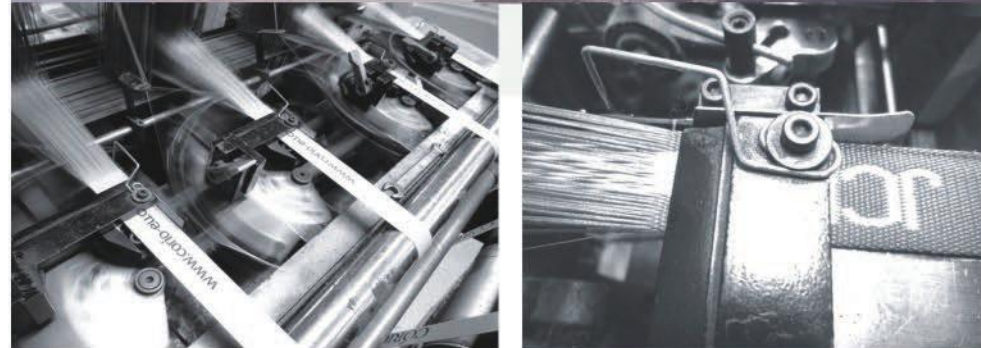

For heat-transfer printing, if expect a bottom color or logo color change, another new mold will have to be opened. If silk-screen printed logo is right, only expect a bigger or smaller space between logos, it needs not to change the film, only needs to change the space between the adjusters fixed on the working base, but for heat transfer printing, a new mold will have to be opened and this extra mold charge needed. For silk-screen printing, the same logo, different bottom color lanyards could share the same logo, while for heat-transfer printing, the same logo, but bottom colors different, will need different molds.

Jacquard weaving is an automated method of raising and lowering yarn on a loom to produce designs, named after its inventor Joseph Marie Jacquard. The machine uses software to control a sequence of operations which produced repeated weave patterns. In this case, both the logo and everything you need on the lanyard, is woven during the production of the lanyard itself.

Woven-logo Lanyards

WL1504 WL1505 WL1506 WL1507 WL1508 WL1509 WL1510 WL1511 WL1512 WL1513 WL1514

New Product, new technology arena

Woven, weave-in or embroidered lanyards can last life time ! Depending on your application, we can weave your logo or specific message directly onto your lanyards ribbons, straps, cords or webbing with sharp images. General speaking, thinner woven lanyards can get higher resolution woven logo, while thicker lanyards will have lower resolution.

Woven lanyard can be a one layer flat ribbon, two layer flat ribbon, two layer flat-tube, or soft-touch round cord style. Most of the woven logos are positive/negative style, the strap is only one ply.

Some of the logos are mirror style, the strap is double ply. We can also make unique both positive style logos, although most of our competitors think it impossible.

WL1501 WL1502 WL1503

WL1515 WL1516 WL1517 WL1518 WL1519

The woven-logo lanyards is more expensive than silk-screen printing lanyards, but it looks more third-dimensional, high-graded and splendid. There is also some technology difficulty in weaving very exquisite logo, too many colors logo or too complex logo. If you really like the woven logo style with exquisite logo, we could combine jacquard with silk-screen printing to achieve it, only the cost higher.

Jacquard weaving

Jacquard weaving makes possible in almost any loom the programmed raising of each warp thread independently of the others. This brings much greater versatility to the weaving process, and offers the highest level of warp yarn control. This mechanism is probably one of the most important weaving inventions as jacquard shedding made possible the automatic production of unlimited varieties of pattern weaving.

WOVEN

Woven-logo Lanyards

WL1520 WL1521 WL1522 WL1523 WL1524 WL1525 WL1526 WL1527 WL1528

WL1529 WL1530 WL1531 WL1532 WL1533

Weaving your logo onto the lanyard ensures it does not rub off or fade away with long term use. We offer up to 6 colors weaving custom dyed to match any PMS color.

IMPRINTED SATIN LANYARDS

WOVEN SATIN LANYARDS

We use strong, high-quality polyester material and "stitch" your text or logo into the lanyard, giving it a textured yet soft feel. Custom woven lanyards give you quality, durability and optimum representation of your company's logo.

Our Premium Satin Lanyards use the elegance of the satin material to make your logo stand out. No matter how simple your logo or message may be these lanyards will showcase it with a great presence.

Lanyards with clock

A new and exciting way to keep track of time.
 Introducing Lanyards with clock.
 Fancy, colorful and yet durable watches designed to suit everyone!

USB Flash Disk Lanyards

The USB Flash Memory Drive plugs into your USB port as a removable hard drive and allows you to easily transport data without having to transport your computer too! Lightweight and compact, the USB Flash Memory Drive is so easy and versatile.

Main Features:

1. Can carry an ID card / mobile phone etc., a perfect moving advertising gift.
2. Flexible and convenient one-size-fits-all design.
3. Water splash proof exterior protects it from damage.
4. No software installation required (except Microsoft Windows 95/98).
5. Easy to carry around. Not easy to lose. Solve the problem always leaving the USB flash drive somewhere, or forgetting to bring a USB flash to a meeting.

Specifications:

1. Interface: High-speed USB 2.0
2. USB size: 54mmX 30mmX 7mm
3. Read speed: 17MB/s
4. Write speed: 15MB/s
5. Power consumption: 3.3V, maximum 38mA
6. Memory size available: 128MB to 4GB
7. No extra power supply required. USB bus-powered.
8. The color available for lanyard and USB: any color for quantity more than 500pcs.
